Answers are intact, but all clues are slightly damaged, in one of four ways:

a) normal definition, one superfluous letter is clued in subsidiary indication;
b) normal definition, one letter of answer is ignored in subsidiary indication;
c) one extraneous letter in definition, normal subsidiary indication;
d) one letter missing in definition, normal subsidiary indication.

Each type of damage occurs 11 times. In some cases, spacing has been altered to cover it up. Clues 3 to 42 are ordered by the length their answers, starting with the shortest ones. In each case, the superfluous, ignored, extraneous, or missing letter indicates the row or column where the answer is to be entered.
